Dolby Voice Room solves the video conferencing problems everyone faces by delivering a dramatically better experience, while also being easy to use for both end users and IT.

Dolby has engineered a solution that provides high-end video conferencing capabilities at a reasonable price. Video conferencing with Dolby Voice Room needs only three easy-to-use integrated components: the Dolby® Conference Phone, camera, and hub. Dolby Voice Room runs a hardened purpose-built OS, conforms to enterprise-grade security requirements, and uses HTTPS and SSH with SHA256 digital certificates.

Reads the room

Dolby Voice Room intelligently adjusts to lighting, motion, acoustics, and voices in different kinds of rooms to give everyone, including remote participants, a great experience.

Stay focused

A 4K wide-angle camera and HDR video mapping adjust to lighting and changing regions of interest, such as people moving in the room or using whiteboards, to give everyone a clear and well-framed view of the meeting.

Speak freely

With dynamic leveling technology that adjusts for soft and distant voices — even in rooms with challenging acoustics — Dolby Voice Room lets everyone speak more naturally, with less background noise, fewer distractions, and stunning clarity.

Works with you

Flexible mounting options allow the camera and hub to adapt to virtually any room or conference setup: mount one or both on a TV, a table, or a nearby surface.
