

# Dramatic Imaging

Dolby Vision™ transforms your mobile viewing experience with dramatic imaging — incredible color, contrast, and brightness that bring entertainment to life wherever you go.

Dolby Vision™ achieves this astonishing image quality through innovative high-dynamic-range (HDR) technologies that, compared to a standard picture, can deliver more colors, for highlights that are significantly brighter, with more light-to-dark contrast than ever before seen on a mobile phone. The result is a refined, lifelike image that will make you forget you are looking at a screen. One look and you will know—this is the mobile experience that engages your senses and inspires your emotions like no other.

## ULTRAVIVID COLORS

Ultravivid colors display many more hues across the full brightness range to show everything from the most intense neon lights to the subtlest shades of flowers.

---

## DEEP DARKS

Deep darks provide a new level of richness and precision that makes every scene look more real and nuanced.

---

## ASTONISHING BRIGHTNESS

Astonishing brightness blazes from the screen while maintaining lifelike color and detail.

---

## EXPANDED CONTRAST

Expanded contrast uses the much wider range of brights to darks to more closely capture the look of the real world.

---

## REFINED DETAIL

Refined detail helps reveal the nuanced textures and patterns of our world on the screen through the precise use of the expanded color and contrast ranges.

---

## ENHANCED DIMENSIONALITY

Enhanced dimensionality emerges from the picture, with more lifelike forms that have realistic shadows and crisp edges.

---

## ADVANCED MOBILE IMAGING

Advanced mobile imaging lets you enjoy an amazing picture on the phone that's with you wherever you go.
